Work Summary

Mahaveer Prajapat
Full Stack Developer
Joined on: 4th July

I joined Seven Unique on 4th July and worked here till 20th September. As a Full Stack Developer, I contributed to multiple projects involving backend, frontend, admin panels, e-commerce, and AI-powered tools. Below is a detailed description of my work:

Jajam Block Prints E-commerce Site

Role: Full Stack Developer. I worked on understanding the backend flow (APIs, database, and logic), contributed to backend development by fixing bugs and adding new features, and later enhanced the frontend to improve customer shopping experience.

PV Classes Website

Role: Full Stack Developer. I helped design and implement features for the online learning platform including test-series, current affairs, digital books, courses, school courses, notes, and PYQs. I worked on both backend logic and frontend interfaces to ensure smooth access for students.

PV Classes Admin Panel

Role: Full Stack Developer. I developed and optimized the admin panel, which allowed complete management of PV Classes. I worked on adding new functionalities for course uploads, content management, and monitoring user activity.

AI Annotation Tool (Text and Image)

Role: Full Stack Developer. I built this tool to automatically detect labels for uploaded text and images. I integrated AWS services and ChatGPT API for implementing intelligent annotation capabilities.

Digihub Tech E-commerce Website

Role: Full Stack Developer. I worked on modules like product listings, shopping cart, checkout, and user authentication. My role ensured a smooth and secure shopping experience for customers.

Digihub Admin Panel

Role: Full Stack Developer. I developed the admin panel where administrators could add and update products, manage customer orders, track transactions, and maintain the platform effectively.

Deenita India Website

Role: Frontend Developer. I focused on building and improving the frontend part of the site. I made the UI more responsive, attractive, and user-friendly.

Sustylo's Website Backend

Role: Backend Developer. I developed the backend logic for customer bookings, freelancer management, payments, and service scheduling. This ensured reliable operations for both customers and freelancers.

Overall, my journey at Seven Unique as a Full Stack Developer was full of learning and growth. I got hands-on experience in managing complete project flows and integrating modern technologies.
